SELF-STUDY

Đề tài: SEQUENCE MODELLING

Mentor: My self
Student: Lại Khánh Hoàng

Tp. Hồ Chí Minh

Mục lục

1	Seq2seq (Sequence Modelling)	2
2	Attention Mechanism	3

1 Seq2seq (Sequence Modelling)

Ý tưởng cốt lõi:

Lưu ý: Length của input và output có thể khác nhau

- Dịch máy (Machine Translation)

- Chatbot

- Image Captioning

2 Attention Mechanism

- Encoder LSTM

$$h_t, c_t = \text{LSTM}(x_t, h_{t-1}, c_{t-1})$$

Trong đó:

- $x_t \in \mathbb{R}^{B \times d_{\text{embed}}}$ (gồm B vector hàng)
- $h_{t-1}, c_{t-1}, h_t, c_t \in \mathbb{R}^{B \times d_h}$
- $H^{\text{enc}} \in \mathbb{R}^{B \times T_{\text{enc}} \times d_h}$

- Attention (Luong style)

$$e_{t,i} = h_t^{\text{dec}^\top} W_a h_i^{\text{enc}}$$

Trong đó:

- $h_t^{\text{dec}} \in \mathbb{R}^{B \times d_h}$: decoder hidden state trước attention
- $h_i^{\text{enc}} \in \mathbb{R}^{B \times d_h}$: encoder hidden state tại vị trí i
- $W_a \in \mathbb{R}^{d_h \times d_h}$
- $E_t = [e_{t,1}, \dots, e_{t,T_{\text{enc}}}] \in \mathbb{R}^{B \times T_{\text{enc}}}$
- Attention weight: $\alpha_{t,i} = \text{Softmax}(E_t)$
- Context vector: $c_t = \sum_i \alpha_{t,i} h_i^{\text{enc}} \in \mathbb{R}^{B \times d_h}$

- Decoder LSTM

$$h_t^{\text{dec}}, c_t^{\text{dec}} = \text{LSTM}([y_{t-1}, c_t], h_{t-1}^{\text{dec}}, c_{t-1}^{\text{dec}})$$

- Output projection

$$o_t = W_o h_t^{\text{dec}} + b_o \in \mathbb{R}^{B \times V}$$

Trong đó:

- V : kích thước từ vựng (num_voc)
- o_t : logits trước softmax
- Probabilities: $p_t = \text{Softmax}(o_t) \in \mathbb{R}^{B \times V}$
